

**SYSTEM, METHOD, AND COMPUTER PROGRAM
PRODUCT FOR AUTOMATICALLY INPUTTING USER DATA
INTO INTERNET BASED ELECTRONIC FORMS**

ABSTRACT OF THE DISCLOSURE

A system and method for automatically inputting user data into Internet based electronic forms includes creating an autofill profile at a user computer. The autofill profile includes user information and is stored at the user computer. When electronic forms are encountered on the Internet, information from the autofill profile is used to automatically fill the input fields of the electronic form. The autofill profile is automatically updated with new user information each time an electronic form is submitted to a server, if the form includes new information manually input by the user.
